# SAFE

## REALISTIC, HANDS-ON SIMULATED FIRE EXTINGUISHER TRAINING

Quality fire safety training is crucial to ensure the safety of staff and to protect your business. To provide a realistic and engaging experience for delegates **SAFE** have invested in state-of-the-art digital fire and portable fire extinguisher simulation equipment.

The law, and most likely your insurers will require that workers are trained in the use of fire fighting equipment, in particular fire extinguishers.

Don't let the first-time workers handle an extinguisher be during a real fire. Prepare workers to successfully put out a fire using the Digital Fire Extinguisher Training System.

The system uses LED driven digital flames and lasers to simulate the discharge of actual extinguishers for a completely clean and safe training experience. Your trainees can enjoy effective training with the benefit of no increase to safety as no live fire is used.

### TRAIN ANYWHERE

Training can be carried out in places where emergencies may really occur, like offices, shops, factories, workshops, or construction sites. Training can take place completely indoors, anywhere, anytime. The system is easily set up in any location and can quickly be relocated during training to change up the scenario and test your trainees' skills.

### TEST SKILLS

Make sure workers are prepared for a real fire by testing their skills – sensors allow the system to react to trainees' actions and respond like a real fire. The flames will only subside and go out if the trainee uses the proper **P.A.S.S.** method (**P**ull the extinguisher pin. **A**im the nozzle at the base of the fire. **S**queeze the lever. **S**weep the nozzle from side to side).

With realistic sound effects, simulator extinguishers are set to discharge for the same amount of time as a real extinguisher, and are weighted accordingly to closely simulate actual extinguishers. The tutor can alter the fire types and difficulty to give realistic scenarios of different fires.

### SPEND MORE TIME TRAINING, LESS TIME CLEANING UP

Cost effective as a number of delegates can be trained in a single day without the need to recharge extinguishers meaning less disruption to working days.

Environmentally friendly - the simulator system contributes to the aspiration of zero carbon emissions as there are no discharges of extinguisher media or live fires which emit carbon to the atmosphere.

-  Cost effective
-  Simulates live fires
-  Simulations can be in the workplace
-  Ideal for office/indoor based workers
-  Allows for evaluation of delegates
-  Delivered at your premises at a time convenient for you
-  Safer than live fire training
-  More candidates trained in a shorter time
-  No mess
-  Can be used indoors or outdoors
-  Not weather dependent

*Why not include Fire Warden training along with our Fire Extinguisher training to ensure full fire safety cover in the workplace.*
